EXECUTIVE SUMMARY

Aspiring Data Analyst with a B. Tech in Information Technology and a diploma in Data Science & GenAI. Strong hands-on understanding of how to work with data end-to-end from engineering, extracting, transforming and differentiating data to, most importantly, analyzing it to uncover patterns and actionable insights. Experienced with SQL, Python, Excel, Power BI, Machine Learning, Deep Learning and Generative AI, with practical exposure to building analytical solutions, predictive models and data-driven applications.

SKILLS

Data & Analytics: Data Cleaning • Data Transformation • Data Engineering • Exploratory Data Analysis • Statistical Analysis • KPI Analysis • Data Visualization

Programming & Databases: Python • Pandas • NumPy • SQL • MySQL

BI & Visualization: Power BI • DAX • Power Query • Excel

AL/ML: Machine Learning • Deep Learning • Generative AI • LangChain • Predictive Modelling • Model Evaluation

Soft Skills: Analytical Thinking • Quick Learning • Problem Solving • Leadership • Time Management • Attention to Detail

PROJECTS

EduShield – Academic Integrity Intelligence Platform | Python • MySQL • Power BI • ML | [GitHub](#)

- Addressed the challenge of identifying potential AI-generated academic submissions by integrating submission, behavioural, detector, and integrity data into a structured analytical workflow.
- Cleaned and validated **14 synthetic relational datasets** using Python and Pandas, then designed a normalized MySQL database with constraints, quality checks, and reporting views for reliable downstream analysis.
- Developed an **XGBoost/scikit-learn prediction pipeline**, Streamlit screening application, and **4-page Power BI dashboard** to analyse AI-generation risk, detector performance, behavioural signals, and integrity cases, enabling evidence-based screening and investigation.

SolarPulse – Solar Energy Underperformance Detection | Python • MySQL • Power BI • ML | [GitHub](#)

- Addressed the challenge of identifying solar sites producing below their expected output by analysing generation, site, and weather data to distinguish normal variation from persistent underperformance.
- Cleaned, transformed, and validated multi-source solar data using Python and Pandas, built a MySQL analytical layer, and developed performance metrics including **actual vs. expected generation, performance deviation, performance ratio, persistence, and energy loss**.
- Built an interactive **Power BI dashboard** and machine learning prediction workflow with a Streamlit application to identify underperforming sites, quantify energy loss, and support data-driven operational monitoring.

EDUCATION

Post Graduate Diploma in Data Science & GenAI | Imarticus Learning | Mar26-Oct2026

B. Tech in Information Technology | Guru Gobind Singh Indraprastha University | 2022-2026

CERTIFICATES

Data Visualizations and Presentation – IBM SkillsBuild | [Credly Link](#)

Data Preparation for Analysis – IBM SkillsBuild | [Credly Link](#)

Data Usability for Organizations - IBM SkillsBuild | [Credly Link](#)
